EV methodology

- EV results prepared based on the Indian Embedded Value (IEV) methodology and principles as set out in Actuarial Practice Standard 10 (APS10) issued by the Institute of Actuaries of India (IAI)
- EV consists of Adjusted Net Worth (ANW) and Value of in-force covered business (VIF)
 - ANW is market value of assets attributable to shareholders, consisting of
 - Required capital
 - Free surplus
 - Value of in-force covered business (VIF) is
 - Present value of future profits; adjusted for
 - Time value of financial options and guarantees;
 - Frictional costs of required capital; and
 - Cost of residual non-hedgeable risks

Components of ANW

- Required capital (RC)
 - The level of required capital is set equal to the amount required to be held to meet supervisory requirements.
 - It is net of the funds for future appropriation (FFAs)
- Free surplus (FS)
 - Market value of any assets allocated to, but not required to support, the in-force covered business

Components of VIF (1/2)

- Present value of future profits (PVFP)
 - Present value of projected distributable profits to shareholders arising from in-force covered business
 - Projection carried out using 'best estimate' non-economic assumptions and market consistent economic assumptions
 - Distributable profits are determined by reference to statutory liabilities
- Frictional Cost of required capital (FC)
 - FCs represent investment management expenses and taxation costs associated with holding the Required capital
 - Investment costs reflected as an explicit reduction to the gross investment return

Components of VIF (2/2)

- Time value of financial options and guarantees (TVFOG)
 - Represents additional cost to shareholders that may arise from the embedded financial options and guarantees
 - Stochastic approach is adopted with methods and assumptions consistent with the underlying embedded value
- Cost of residual non-hedgeable risk (CRNHR)
 - An allowance for risks to shareholder value to the extent not already allowed for in the TVFOG or the PVFP
 - Allowance for asymmetric risks of operational, catastrophe mortality/morbidity and mass lapsation risk
 - Determined using a cost-of-capital approach
 - Allowance for diversification benefits among the non-hedgeable risks, other than the operational risk

Components of EV movement (1/2)

- Expected return on existing business (unwind)
 - Expected investment income at opening reference rate on VIF and ANW
 - Expected excess 'real world' investment return over the opening reference rate on VIF and ANW
- Operating assumption changes
 - Impact of the update of non-economic assumptions both on best estimate and statutory bases to those adopted in the closing EV
- Value of new business
 - Additional value to shareholders created through new business during the period

Components of EV movement (2/2)

- Operating experience variance
 - Captures impact of any deviation of actual experience from assumed in the opening EV during the inter-valuation period
- Economic assumption changes and Investment variance
 - Impact of the update of the reference rate yield curve, inflation and valuation economic assumptions from opening EV to closing EV
 - Captures the difference between the actual investment return and the expected 'real world' assumed return
- Net capital injection
 - Reflects any capital injected less any dividends paid out

Key assumptions underlying EV (1/2)

- Discount rate and Fund earning rates
 - Set equal to reference rates which is proxy for risk free rates
 - Reference rates derived on the basis of zero coupon yield curve published by the Clearing Corporation of India Limited
- Expenses and commission
 - Based on the Company's actual expenses during FY2020 with no anticipation for productivity gains or cost efficiencies
 - Commission rates are based on the actual commission payable to the distributors

Key assumptions underlying EV (2/2)

- Mortality and morbidity
 - Based on company's experience with an allowance for future improvements in respect of annuities
- Persistency
 - Based on company's experience
- Taxation
 - Taxation costs reflect the reduction in costs due to dividend income being tax exempt subject to maximum of dividend declared and distributed¹
