Strategy: Market leadership + Profitable growth

Segmented approach to tap market opportunity- Savings & Protection

- Leverage market opportunity for saving products through
 - Delivery of superior customer value through better products, customer service, fund performance and claims management
 - Focus on key local markets through customized regional strategy
- Multi prong product/ channel approach to tap protection opportunity- Retail through online and offline mode, Mortgage linked and Group term

Strengthen multi channel architecture and explore non-traditional channels

- Focus on deepening existing bancassurance relationships and seeking alliances with new banks
- Focus on increasing scale of our agency distribution channel
- Using data analytics capability to grow direct to customers
- Establish relationship with new non bank partners with focus on quality

Focus on increasing value of new business

- Expand our protection business
- Improve customer retention
- Maintain market-leading cost efficiency

Leverage technology for profitable growth

- Digitalizing sales and service processes
- Increasing digital marketing and sales

Key Highlights

₹ bn	FY2016	FY2017	Growth	Q1FY2017	Q1FY2018	Growth
APE ¹	51.70	66.25	28.1%	10.12	17.04	68.4%

Industry overview

Favourable demography

Large and Growing Population Base¹

2016 Population (mn)

High Share of Working Population¹

Population of age 25-59 years (in mn)

- Indian economy poised to head towards sustained growth fuelled by favourable demographics, rising affluence

Rising Affluence²

GDP per Capita CAGR (2007-2017)

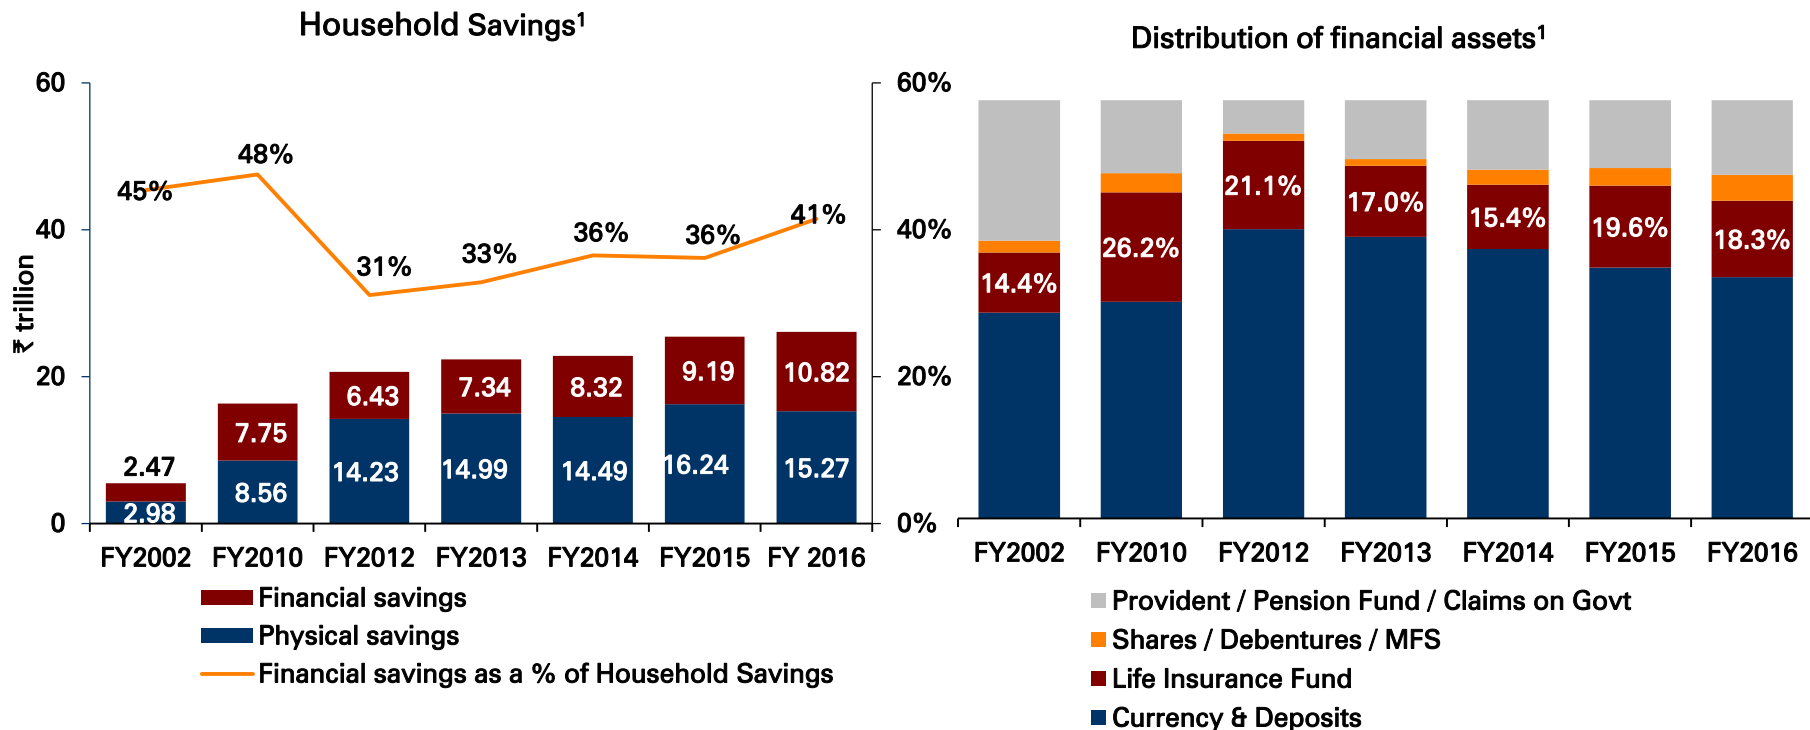

Driving GDP Growth³

- Growth rate of total premium written by the insurance industry has outpaced the GDP growth rate over the period of FY2002-FY2017⁴

- Source: UN population division 2017
- Source: Economist Intelligence Unit, CRISIL Research
- Source: World Bank
- Source: Life Insurance Council, CSO

Share of insurance in household savings

- Part of physical savings shifting to financial savings
- Insurance share of financial saving 18.3% compared to peak of 26.2% in FY2010
- Improved product proposition of life insurance savings products

Protection opportunity

Sum assured as % of GDP^{1,2}

Protection Gap^{3,4}

- Sum assured as % of GDP low compared to other countries
- Protection gap for India US \$ 8.56 trillion

1. As of FY2017 for India and FY2015 for others
 2. Source: McKinsey analysis 2015 , Life Insurance Council, CSO
 3. Protection Gap (%): Ratio of protection lacking/protection needed

Persistency across Channel Categories

Indian Embedded Value

Analysis of movement in IEV (FY2017)

1: EVOP is the embedded value operating profit net of tax

2: ROEV is the return on embedded value net of tax

Computed as per APS 10 and reviewed by an Independent Actuary

IEV methodology ... (1/2)

- EV results prepared based on the Indian Embedded Value (IEV) methodology and principles as set out in Actuarial Practice Standard 10 (APS10) issued by the Institute of Actuaries of India (IAI)

IEV methodology ... (2/2)

- IEV consists of Adjusted Net Worth (ANW) and Value of in-force covered business (VIF)
 - ANW is market value of assets attributable to shareholders, consisting of
 - Required Capital
 - Free Surplus
 - Value of in-force covered business (VIF) is
 - Present value of future profits; adjusted for
 - Time value of financial options and guarantees;
 - Frictional costs of required capital; and
 - Cost of residual non-hedgeable risks

Components of ANW

- **Required capital (RC)**
 - The level of required capital is set equal to the amount required to be held to meet supervisory requirements
 - It is net of the funds for future appropriation (FFAs)
- **Free surplus (FS)**
 - Market value of any assets allocated to, but not required to support, the in-force covered business

Components of VIF ... (1/4)

- **Present value of future profits (PVFP)**
 - Present value of projected distributable profits to shareholders arising from in-force covered business
 - Projection carried out using 'best estimate' non-economic assumptions and market consistent economic assumptions
 - Distributable profits are determined by reference to statutory liabilities

Components of VIF ... (2/4)

- **Frictional Cost of required capital (FC)**
 - FCs represent investment management expenses and taxation costs associated with holding the Required capital
 - Investment costs reflected as an explicit reduction to the gross investment return

Components of VIF ... (3/4)

- **Time value of financial options and guarantees (TVFOG)**
 - TVFOG represents additional cost to shareholders that may arise from the embedded financial options and guarantees
 - Stochastic approach is adopted with methods and assumptions consistent with the underlying embedded value

Components of VIF ... (4/4)

- **Cost of residual non-hedgeable risk (CRNHR)**
 - CRNHR is an allowance for risks to shareholder value to the extent not already allowed for in the TVFOG or the PVFP
 - Allowance has been made for asymmetric risks of operational, catastrophe mortality / morbidity and mass lapsation risk
 - CRNHR determined using a cost-of-capital approach
 - Allowance has been made for diversification benefits among the non-hedgeable risks, other than the operational risk
 - 4% annual charge applied to capital required

Components of IEV movement ... (1/2)

- **Operating assumption changes**
 - Impact of the update of non-economic assumptions both on best estimate and statutory bases to those adopted in the closing IEV
- **Expected return on existing business (unwind)**
 - Expected investment income at opening reference rate on VIF and ANW
 - Expected excess 'real world' investment return over the opening reference rate on VIF and ANW
- **Value of new business**
 - Additional value to shareholders created through new business during the period

Components of IEV movement ... (2/2)

- **Operating experience variance**
 - Captures impact of any deviation of actual experience from assumed in the opening IEV during the inter-valuation period
- **Economic assumption changes and Investment variance**
 - Impact of the update of the reference rate yield curve, inflation and valuation economic assumptions from opening IEV to closing IEV
 - Captures the difference between the actual investment return and the expected 'real world' assumed return
- **Net capital injection**
 - Reflects any capital injected less any dividends paid out

Key assumptions underlying IEV ... (1/2)

- **Discount rate and Fund earning rates**
 - Set equal to reference rates which is proxy for risk free rates
 - Reference rates derived on the basis of zero coupon yield curve published by the Clearing Corporation of India Limited
- **Expenses and commission**
 - Based on the Company's actual expenses during FY2017 with no anticipation for productivity gains or cost efficiencies
 - Commission rates are based on the actual commission payable to the distributors

Key assumptions underlying IEV ... (2/2)

- **Mortality and morbidity**
 - Based on Company's experience with an allowance for future improvements in respect of annuities
- **Persistency**
 - Based on Company's experience
- **Taxation**
 - Allowance has been made for future taxation costs based on current tax rates

Sensitivity analysis (FY2017)

Scenario	% change in IEV	% change in VNB
Increase in 100 bps in the reference rates	(2.0)	(5.2)
Decrease in 100 bps in the reference rates	2.1	5.5
10% increase in the discontinuance rates	(1.1)	(10.6)
10% decrease in the discontinuance rates	1.2	10.9
10% increase in mortality/ morbidity rates	(0.8)	(6.1)
10% decrease in mortality/ morbidity rates	0.8	6.1
10% increase in acquisition expenses	Nil	(20.5)
10% decrease in acquisition expenses	Nil	20.5
10% increase in maintenance expenses	(1.1)	(5.5)
10% decrease in maintenance expenses	1.1	5.4
Tax rates increased to 28.84%	(11.0)	(22.0)

Economic assumptions underlying IEV

Tenor (years)	Reference Rates	
	March 31, 2016	March 31, 2017
1	7.24%	6.35%
5	8.22%	7.78%
10	8.34%	8.02%
15	8.40%	8.03%
20	8.46%	8.03%
25	8.50%	8.03%
30	8.52%	8.03%
