#### **EV** methodology

- EV results prepared based on the Indian Embedded Value (IEV)
  methodology and principles as set out in Actuarial Practice Standard 10
  (APS10) issued by the Institute of Actuaries of India (IAI)
- EV consists of Adjusted Net Worth (ANW) and Value of in-force covered business (VIF)
  - ANW is market value of assets attributable to shareholders, consisting of
    - Required capital
    - Free surplus
  - Value of in-force covered business (VIF) is
    - Present value of future profits; adjusted for
    - Time value of financial options and guarantees;
    - Frictional costs of required capital; and
    - Cost of residual non-hedgeable risks

#### **Components of ANW**

- Required capital (RC)
  - The level of required capital is set equal to the amount required to be held to meet supervisory requirements.
  - It is net of the funds for future appropriation (FFAs)
- Free surplus (FS)
  - Market value of any assets allocated to, but not required to support, the in-force covered business

#### Components of VIF (1/2)

- Present value of future profits (PVFP)
  - Present value of projected distributable profits to shareholders arising from inforce covered business
  - Projection carried out using 'best estimate' non-economic assumptions and market consistent economic assumptions
  - Distributable profits are determined by reference to statutory liabilities
- Frictional Cost of required capital (FC)
  - FCs represent investment management expenses and taxation costs associated with holding the Required capital
  - Investment costs reflected as an explicit reduction to the gross investment return

#### Components of VIF (2/2)

- Time value of financial options and guarantees (TVFOG)
  - Represents additional cost to shareholders that may arise from the embedded financial options and guarantees
  - Stochastic approach is adopted with methods and assumptions consistent with the underlying embedded value
- Cost of residual non-hedgeable risk (CRNHR)
  - An allowance for risks to shareholder value to the extent not already allowed for in the TVFOG or the PVFP
  - Allowance for asymmetric risks of operational, catastrophe mortality/morbidity and mass lapsation risk
  - Determined using a cost-of-capital approach
  - Allowance for diversification benefits among the non-hedgeable risks, other than the operational risk

#### Components of EV movement (1/2)

- Expected return on existing business (unwind)
  - Expected investment income at opening reference rate on VIF and ANW
  - Expected excess 'real world' investment return over the opening reference rate on VIF and ANW
- Operating assumption changes
  - Impact of the update of non-economic assumptions both on best estimate and statutory bases to those adopted in the closing EV
- Value of new business
  - Additional value to shareholders created through new business during the period

#### Components of EV movement (2/2)

- Operating experience variance
  - Captures impact of any deviation of actual experience from assumed in the opening EV during the inter-valuation period
- Economic assumption changes and Investment variance
  - Impact of the update of the reference rate yield curve, inflation and valuation economic assumptions from opening EV to closing EV
  - Captures the difference between the actual investment return and the expected 'real world' assumed return
- Net capital injection
  - Reflects any capital injected less any dividends paid out

## Key assumptions underlying EV (1/2)

- Discount rate and Fund earning rates
  - Set equal to reference rates which is proxy for risk free rates
  - Reference rates derived on the basis of zero coupon yield curve published by the Clearing Corporation of India Limited
- Expenses and commission
  - Based on the Company's actual expenses during FY2020 with no anticipation for productivity gains or cost efficiencies
  - Commission rates are based on the actual commission payable to the distributors

## Key assumptions underlying EV (2/2)

- Mortality and morbidity
  - Based on company's experience with an allowance for future improvements in respect of annuities
- Persistency
  - Based on company's experience
- Taxation
  - Taxation costs reflect the reduction in costs due to dividend income being tax exempt subject to maximum of dividend declared and distributed<sup>1</sup>

#### Glossary

- Annualized Premium Equivalent (APE) Annualized Premium Equivalent (APE) is the sum of the annualized first year premiums on regular premium policies, and ten percent of single premiums, from both individual and group customers
- Assets under management (AUM) AUM refers to the carrying value of investments managed by the company and includes loans against policies and net current assets pertaining to investments
- Embedded Value (EV) Embedded Value (EV) represents the present value of shareholders' interests in the earnings distributable from the assets allocated to the business after sufficient allowance for the aggregate risks in the business
- Embedded Value Operating Profit (EVOP) Embedded Value Operating Profit (EVOP) is a measure of the increase in the EV during any given period due to matters that can be influenced by management
- Retail Weighted Received Premium (RWRP) Premiums actually received by the insurers under individual products and weighted at the rate of ten percent for single premiums
- Total weighted received premium (TWRP) Measure of premiums received on both retail and group products and is the sum of first year and renewal premiums on regular premium policies and ten percent of single premiums received during any given period
- Persistency Ratio Persistency ratio is the percentage of policies that have not lapsed and is expressed as 13th month, 49th month persistency etc. depicting the persistency level at 13th month (2nd year) and 49th month (5th year) respectively, after issuance of contract
